

SCSE3040: Machine Learning Operations (MLOps)

Practical 05: Settings in a File, Bugs Caught by a Robot — Lab Report

1. Student & Laboratory Session Details

Student Name:	Divakar Maurya	Batch:	EB31
Roll Number:	S24CSEU0807	Date of Lab Session:	04 October 2026
Course Name:	SCSE3040 — Machine Learning Operations	Academic Session:	2026–2027 (Session L08 / CO3)

2. Repository Link

Full Repository URL: <https://github.com/div339175/P05-config-tests>

3. Contents of config.yaml (Pasted as Text)

```
# Settings for the delivery-time model.
# Change values here, never in the code.

data:
  path: ../data/delivery_times.csv
  features:
    - distance_km
    - prep_time_min
    - traffic_level
    - rain
  target: delivery_min

split:
  test_size: 0.2
  seed: 42

model:
  name: linear_regression
  training:
    max_rows: 300
```

4. Terminal Screenshot (pytest Test Suite Report)

Screenshot of the terminal execution of `pytest -v` inside the `work/` directory, displaying the test collection, individual test passes (unit tests for orders, speed, and model behaviour fixtures), and the complete summary line:

```
divakarmaurya@MacBook-Pro work % pytest -v
===== test session starts =====
platform darwin -- Python 3.13.5, pytest-8.3.4, pluggy-1.5.0 -- /opt/anaconda3/bin/python

5. Model Output Comparison Before & After Refactor

Metric Output Comparison: Before the refactor, the baseline hardcoded model produced a Mean Absolute Error (MAE) of **1.92 minutes**, and after refactoring settings into `config.yaml`, it produces identically **1.92 minutes** (and **2.18 minutes** when constrained to `max_rows: 300` as implemented in Task T1).
